Outsourcing?

859-233-7445

Outsourcing through Blue Grass Manufacturing Works for You!

Thinking about OUTSOURCING? Save 20% to 40%

Have a process that is not a core part of your business that you would like to move out of your plant but still control it?

You have done everything you know to lower costs but all that's left is moving to the lower cost infrastructure of a contractor or manufacturer.

Moving Out of the Country is Not Desirable?

We have relocated many processes from customers' facilities and moved them into our plant. If you have a lot of products and equipment to move, we can arrange a dedicated low cost facility and management team to manufacture and ship your product.

We will also handle warehousing, distribution, and just send you the invoices.

Lean Manufacturing Principles for a leaner budget.

BGM is especially good at designing and operating labor-intensive assembly lines using lean manufacturing principles.

The day we start operating your assembly processes, we will be producing parts under ISO -- 9000 certification. We are an UL Approved site.

One source. One Vision.

Contract Manufacturers

Start Your Product Out the Right Way.

If you are just beginning to manufacture your product, you will be able to avoid the enormous expenses of selecting and installing an Enterprise Resource Planning System (ERP). You can use BGM's Exact Macola System for engineering data, MRP, inventory and all the accounting functions. We also have CAD CAM, estimating and Microsoft's Business Suite of software available.

On Site Process Management.

Some of our customers just could not justify moving products out of their plant due to size, logistics, or issues of control. So, we put a "plant within a plant" in their facility built around our processes, procedures and management systems.

Let's Talk About It -- It May Be Your Best Solution

Sit down and talk with us before you rule out the possibility of outsourcing. It is not as difficult as you think to get this opportunity to focus your business on its core products and processes.

The Right Choice...
