ISO 9001:2000 CERTIFIED

Quality System

One of the most important aspects of our company, our quality system lies at the heart of everything we do and ties together the efforts of all our employees toward a common goal, summarized by our quality policy:

BGM is committed to achieving the following objectives for quality:

- To maintain and continuously improve the quality of our products and services
- To provide confidence to our customers that the requirements for quality are being, or will be achieved in the delivered product or services.
- To provide confidence to management and employees that the requirements for quality are being fulfilled and maintained, and that quality improvements take place.
- To improve the quality of our own operations so as to continually meet all of the customers' and shareholders' stated or implied needs.
- To ensure all quality system requirements including ISO9001:2000, QS 9000, and ISO16949 are being fulfilled.

Blue Grass Manufacturing

Contract Manufacturers

World Class Manufacturer – World Class Quality.

In addition to our own internally developed quality documentation and procedures, we're always willing to comply with customer-generated quality requirements, including PPAP (Production Part Approval Process) the generally accepted process for sample submission, including submission of material certification, source warrant, layout, dimensional measurement documentation; functional testing documentation; and an appearance approval report), FMEA (Failure Mode and Effect Analysis), Histograms, Pareto Analysis, SPC (Statistical Process Control) capability studies and X bar and R control charts and so on. Frequently our customers request special control plans, final audit sheets, plating certification, or heat-treating certification.

We have a well-equipped metrology lab that is certified to the US Bureau of Standards that includes a Browne and Sharpe Coordinate Measuring Machine with statistical software, optical comparators, microscopes, micrometers, height gages, hardness testers, surface testers, laser mics, and much more.

We follow up on every defect found until its root cause is identified and corrected with changes to our methods and process documentation. Our procedures include the procedures you would expect to find at a world class manufacturer:

- All Elements of QS 9000 documentation (P-FMEA, Control Plans, PSW, Etc.)
- Automated On-time delivery & Defect Reporting System
- Employee Training Programs
- Calibration System
- First Article Reporting / Certification
- Receiving, In Process and Final Inspection
- Process Change Request / Corrective / Preventive Actions
- Materials Review Reports

We welcome customer audits of our quality system, and copies of our Quality Manual are available upon request.
